

Samaxia Announces Upcoming UK Availability of Lacri+® Vitamin A

Lincoln, UK: Samaxia Ltd is pleased to announce the upcoming UK availability of **Lacri+® Vitamin A**, a preservative-free veterinary ophthalmic ointment developed by MP Labo.

Lacri+® Vitamin A will soon be available through leading UK veterinary wholesalers. In the meantime, veterinary teams can access the product directly from Samaxia. Veterinary professionals can:

- Order via the Vet Portal: <https://www.samaxia.com/order-now>
- Contact the team at: enquiries@samaxia.com

Supporting Ocular Surface Care in Practice

Lacri+® Vitamin A is formulated with vitamin A (25,000 IU/100 g) and is designed to support the normal maintenance of the ocular surface in dogs and cats.

Vitamin A plays an important role in maintaining corneal and conjunctival epithelial cells and contributes to tear film stability. When applied topically, it supports ocular surface condition and comfort, particularly in animals where tear film quality may be compromised or where additional ocular support may be beneficial.

Lacri+® Vitamin A may be considered by veterinary teams as part of an ocular care routine, including in animals predisposed to ocular dryness.

Flexible Use in Clinical Settings

Lacri+® Vitamin A can be incorporated into daily ocular care routines and may be alternated with **Lacri+®**, a cross-linked hyaluronic acid tear substitute (shelf life of 3 months once opened), within a 24-hour approach:

- **Lacri+® during the day**
- **Lacri+® Vitamin A overnight**

This provides flexibility for veterinary teams managing ongoing ocular surface care.

Part of a Complementary Ophthalmology Range

The addition of **Lacri+® Vitamin A** further strengthens the MP Labo ophthalmology portfolio available in the UK through Samaxia:

- **Lacri+®**: preservative-free tear substitute for ocular lubrication
- **LacriProtect®** : preservative-free single-use ocular carbomer lubrication for peri-anaesthetic use

Together, these products support a structured approach to ocular surface care in companion animals.

Product Information

- 5 g tube
- Suitable for use for up to 3 months after opening

Availability and Next Steps

Samaxia is working closely with its wholesaler partners to bring **Lacri+® Vitamin A** into the UK veterinary supply chain.

In the interim, practices can order directly or contact the **Samaxia** team for further information, product support, or to arrange a virtual or in-practice Lunch & Learn.
